

## WHAT DO YOU KNOW ABOUT SPANISH FOREST?

- According to FAO, the largest forest areas in Europe are Russia, Sweden, Finland, Spain and France.
- The forests in our country are expanding: 13.8 million hectares in 1990 to 17 million hectares in 2000 or 18.2 million hectares in 2010, according to MAGRAMA.
- Many more trees are planted than are logged: annual wood growth in our country in 2014 was 46.3 million cubic metres of barked timber and annual loggings for all uses (including papermaking, which accounts for a little more than one third of the total) were just 14.7 million m<sup>3</sup> of debarked wood.
- The forest economy in Spain involves almost 30,000 companies, 200,000 workers (forestry and reforestation, paper industry, wood and furniture, biomass... ) and a turnover of over 18 billion euros.
